

INVITATION

„E-mental health implementation: The digital revolution in mental healthcare“

E-mental health has proven its potential: patient empowerment, cost-effectiveness, independency of time and place are only some of its benefits. However, the implementation of e-mental health in routine care in Germany is proceeding slowly. Frameworks ensuring and enhancing successful implementation of high quality and safe e-mental health applications are needed. Designs for sustainable implementation into real-world settings are required.

How can these implementation challenges of e-mental health be mastered? How can quality and safety of e-mental health applications be ensured? How should admission requirements for the healthcare market in Germany be adapted?

These topics and questions around the use of digital applications in mental healthcare will be targeted at our seminar. We expect participants from the areas of health care, science, politics and development.

Monday, 11 June 2018

11:00–17:00

Haus der Universität | Schadowplatz 14 | 40212 Düsseldorf

Please turn the page.

Programme

Moderator: Prof. Dr. Wolfgang Gaebel, Chairman of the German Alliance on Mental Health, Past President European Psychiatric Association
