Screening PTSD through ICT tools: SAM - Bart Schrieken, Interapy, The Netherlands
Q&A
16h00-16h15 Conclusions
16h15-17h00 Networking & drinks

E-santé mentale : un projet européen

e-mental health innovation and transnational implementation platform North West Europe (eMEN)

Each year almost 165 million, or 38%, of people in the EU experience a mental health condition such as depression or anxiety. Mental ill health presents a huge and growing economic and social burden for society, accounting for 20% of the disease burden.

Innovative and high-quality e-mental health plays an important role in tackling this societal challenge. However, due to specific challenges, there are large regional differences with regard to the use of e-mental health products, for prevention and treatment.

The average use across the Netherlands, France, Germany, UK, Belgium and Ireland is now 8%, which is low compared to other healthcare sectors. Unmet needs are also high, with an EU average of 6.8%. At the end of the project, the average use of e-mental health products will have increased by 8%, to 15%. This directly contributes to the region's economic performance and innovation capacity: reducing healthcare costs, better care and access to prevention and treatment and increased growth of eHealth SMEs.

In order to realise this change, a first-of-its-kind, EU-wide platform for e-mental health innovation and implementation has been formed by private and public partners in North West Europe. Project partners are key stakeholders in the field of e-mental health and have a broad EU network.
